## Background

**Target Background :** A Camelid VHH Antibody (also called single-domain antibody, sdAb or Nanobody by Ablynx) is a peptide chain of about 110 amino acids long, comprising one variable domain of a heavy-chain antibody. Like a whole antibody, it is able to bind selectively to a specific antigen. VHH antibodies allow a broad range of applications in biotechnical as well as therapeutic use due to their small size, simple production and high affinity.

**Synonyms :** Rabbit Anti-Camelid VHH Antibody Monoclonal Secondary Antibody (Min X Ms, Rt, Rb, Ch, Gt, Hu)
